

INTRODUCTION

Dash Finance is a cutting-edge ecosystem on zkSync that aims to become the leading incubator and accelerator for promising projects in the DeFi ecosystem.

New projects will launch on Dashpad and liquidity will be added on Dashswap, creating an ecosystem in which projects can be born, launch, and grow, all managed in a truly decentralized way by Dash Finance's DAO, governed by \$Dash holders.

Join the revolution of decentralized finance with Dash Finance and be a part of the future of finance on zkSync!

ABOUT DEX AND LAUNCHPAD

zkSync is a rapidly growing ecosystem with a plethora of protocols and platforms looking to launch or migrate to the network to grow and thrive.

Dash Finance aims to become the leading incubator and accelerator on zkSync, empowering promising projects to become the future leading protocols of this blockchain and the entire DeFi ecosystem.

Through Dashpad and Dashswap, we offer a truly decentralized way to launch, trade, and grow with governance managed by \$Dash holders.

DAO

As DAOs continue to grow and take control of the crypto world, the billions in assets they hold and the future of the biggest DeFi protocols they control cannot be put at risk on a vulnerable EVM chain. They need to be secured on Ethereum or, better yet, a Layer 2 that inherits its security.

Governance tokens are becoming the standard for truly decentralized projects, granting holders voting power, revenue shares, and other benefits that give them a key role in project development. However, Ethereum's high fees are making it difficult for small investors to participate in governance proposals.

We believe in a future dominated by DAOs and are committed to creating a truly decentralized project with Dash Finance. As a holder of \$Dash, you'll have voting power, priority access to launches, #RealYield revenue, and total control over the protocol's future.

Name: Dash token

Ticker: \$Ds

Chain: Zksync

Total supply: 150,000

TOKEN UTILITY

\$DASH is a governance token that offers numerous benefits to its holders. By holding \$DASH, users can participate in the governance of the protocol, take part in Launchpads, and earn Real Yield from fees and taxes.

Buy Back and Burn

To increase the value of \$DASH, the protocol implements a buy-back and burn mechanism through various fees and taxes:

2% Buy Tax: Every user who purchases \$DASH will pay a 2% buy tax, which will be used to buy back and burn \$DASH.

40% Swap Fees: 40% of the trading fees earned will be used to buy back and burn \$DASH.

5% Exit Fee: Users who contribute to a new project's launch can withdraw their contribution but must pay a 10% fee, of which 50% will be given as a reward to users staking and the other half will be used to buy back and burn \$DASH.

1% Raised Funds: 1% of every new project's launch fundraise will be used to buy back and burn \$DASH.

30% Unstaking Fee: 30% of the unstaking penalty fee paid in \$DASH will be burnt to reduce the supply.

TOKEN UTILITY

\$DASH Staking

Users can also lock their \$DASH for 30, 90, or 180 days, with each duration offering its unique benefits.

Lock 30 Days: Users can participate in governance voting and have private Launchpad access.

Lock 90 Days: In addition to the benefits of the 30-day lock, users receive a 5% reward from Exit fees and a 1% reward from Sell Tax. They can also receive a 50% reward in \$ETH from Swap fees.

Lock 180 Days: This option offers the same benefits as the 90-day lock, with a higher multiplier of x9.

Overall, \$DASH holders have significant benefits, including participating in governance, priority access to Launchpads, and the opportunity to earn Real Yield through fees and taxes. The buy-back and burn mechanism and staking rewards also ensure that the token's value increases over time.
